

Second Scaling Scan training program

CIMMYT assists the **Green Innovation Centers (GIC)** Sustainable Mechanization Working Group with innovations and approaches to scaling. **Nine members of the working group have been trained and coached to become certified scaling Scan facilitators** between February and May 2022. We want to build on this success by hosting a second Scaling Scan Trainer Program (SST Program) for ICM Working Group members and partners.

We are inviting participants who are qualified and mandated to organize a 1-3 day physical Scaling Scan workshop in your countries using project funding at the country level. In this way **you will join a community to learn and share** the latest concepts, principles and practices in scaling up. It will explain how to develop impact in order **to create realistic, accountable and long-term scaling up ambitions and strategies.**

The Scaling Scan aims to help project teams and their partners understand the concept of scaling in context, and the steps they need to take to sustainably anchor and build positive outcomes from your projects.

The training will take place as follows:

Virtual training on scaling up and facilitating workshops in English and French on November 22 and 24, 2022 from 1:00 - 4:00 pm Brussels time.

1

2

Individual CIMMYT coaching to help participants prepare their physical Scaling Scan workshops.

3

Participants organize a physical Scaling Scan workshop between December 1 and February 20, 2023.

4

Participants who complete the trainer program by March 1, 2023 will receive a CIMMYT Academy certificate.

Course duration: Approximately **20 hours**

Costs: **CIMMYT will cover the costs** of training and mentoring, while the **IAG country offices** will fund the organization of a physical workshop between November 2022 and February 20, 2023.

If you are interested, and have your supervisor's approval, please send Eva your name and email e.valencia@cgiar.org by October 18, 2022. We follow a first come, first served basis. We are happy to answer any additional questions you may have.

Sincerely,
Eva and Lennart / Scaling consultants at CIMMYT
